I am a Full Stack Web Developer that is collaborative, but also a strong, independent, problem solver. Having used React paired with Material-UI Library, I have experience developing an intuitive user interface. I utilized reusable components and virtual DOM to give the app a mobile feel and used MongoDB and GraphQL to give it extensive functionality. Documentation is my best friend, along with having relentless tenacity with debugging errors in order to create a smooth performing and robust application.

Work History

Massage Envy 2017-2021

- Making recommendations as to feasibility of implementation of modified or new technologies.
